

Nebraska Wastewater Surveillance for SARS-CoV-2 Facility Report for Hastings WWTP

Report for Week Ending: 8/5/23 (Week 31)

SARS-CoV-2 virus concentration in wastewater

Sample collection date: 8/1/23
Result: **Detected**
Raw Concentration: **79,520** copies/L
Normalized concentration: **45.5M** copies/person

Normalized concentration is the raw concentration adjusted for sewage flow rate and population, in million copies per person.

Current virus levels in wastewater

Moderate (40-<60%)
as of 8/1/23

15 day percent change

Increasing
from 7/17/23 to 8/1/23

Current virus levels is based on a percentile that shows whether virus levels at a site are currently higher or lower than past historical levels at the same site. Very High: 80-100%, High: 60-<80%, Moderate: 40-<60%, Low: 20-<40%, Very Low: <20%.

Percent change is the modeled rate of change over last 15 days. Categories include: Increasing (10% or higher); Stable (10% to -10%); Decreasing (-10% or lower)

SARS-CoV-2 normalized wastewater concentration trends by sample collection date

The grey dots represent SARS-CoV-2 normalized wastewater concentration for each sample collection date. Wastewater levels shown in red line are simple smoothing splines to help interpret trends over time. They do not indicate a specific or actionable values. **Note:** As of 05/25/2023, the lab methodology to quantify SARS-COV-2 has been changed from qPCR to dPCR.

SARS-CoV-2 wastewater concentrations by collection date: Last 8 samples

	7/7/23	7/11/23	7/13/23	7/17/23	7/18/23	7/25/23	7/27/23	8/1/23
Raw Concentration (copies/L)	14,787	9,951	38,985	14,723	21,900	48,100	152,390	79,520
Normalized Concentration (copies/person)	8.0M	5.3M	21.6M	7.8M	12.9M	28.6M	79.9M	45.5M

Comparison of normalized virus concentrations to all other Nebraska sites in last 1 month
