

Nebraska Wastewater Surveillance for SARS-CoV-2 Facility Report for Hastings WWTP

Report for Week Ending: 9/2/23 (Week 35)

SARS-CoV-2 virus concentration in wastewater

Sample collection date: 8/29/23
Result: **Detected**
Raw Concentration: **89,651** copies/L
Normalized concentration: **50.4M** copies/person

Normalized concentration is the raw concentration adjusted for sewage flow rate and population, in million copies per person.

Current virus levels in wastewater

High (60-<80%)
as of 8/29/23

15 day percent change

Decreasing
from 8/14/23 to 8/29/23

Current virus levels is based on a percentile that shows whether virus levels at a site are currently higher or lower than past historical levels at the same site. Very High: 80-100%, High: 60-<80%, Moderate: 40-<60%, Low: 20-<40%, Very Low: <20%.

Percent change is the modeled rate of change over last 15 days. Categories include: Increasing (10% or higher); Stable (10% to -10%); Decreasing (-10% or lower)

SARS-CoV-2 normalized wastewater concentration trends by sample collection date

The grey dots represent SARS-CoV-2 normalized wastewater concentration for each sample collection date. Wastewater levels shown in red line are simple smoothing splines to help interpret trends over time. They do not indicate a specific or actionable values. **Note:** As of 05/25/2023, the lab methodology to quantify SARS-COV-2 has been changed from qPCR to dPCR.

SARS-CoV-2 wastewater concentrations by collection date: Last 8 samples

	8/3/23	8/7/23	8/10/23	8/14/23	8/15/23	8/22/23	8/24/23	8/29/23
Raw Concentration (copies/L)	53,875	54,750	74,987	235,627	194,550	48,450	180,015	89,651
Normalized Concentration (copies/person)	31.9M	27.6M	41.0M	120.8M	98.4M	27.5M	102.5M	50.4M

Comparison of normalized virus concentrations to all other Nebraska sites in last 1 month

Data Source: Nebraska Wastewater Surveillance System (NeWSS). Project in collaboration between Nebraska DHHS, UNL, Nebraska Public Health Lab (NPHL), and local public health departments.
